

Front End Developer

Job Introduction

Climbing Turn is a software and web agency based in Hertfordshire. We create bespoke websites and business applications.

The type of work we undertake very much depends upon the needs of our clients and we aim to be the best agency to give the most value to a business. This means that our developers need to be keen to learn new skills and think of great business solutions. It is an opportunity for a talented developer to get their voice heard and make their work count.

We are looking for an imaginative front end developer who is a self starter that is reliable and has good communication skills. This individual needs to be confident to take a lead in development and be willing to pass on skills to other team members.

Role Responsibility

- Work closely with the Climbing Turn team.
- Be reliable and consistent in approach to work.
- Take initiative on projects and come up with appropriate solutions.
- Be able to communicate effectively with both colleagues and clients.
- Adhere to coding guidelines and in house styles.
- Suggest improved ways of working when appropriate.
- Strong attention to quality.

The Ideal Candidate

- Outstanding HTML5 and CSS3 skills with familiarity with frameworks such as Bootstrap or foundation.
- Excellent development skills in JavaScript including JQuery.

- Strong knowledge of accessibility standards, cross-browser issues on both PC and Mac.
- Proven experience with front end development.
- Proven experience of design work in the conversational user interface domain.
- Experience in using Photoshop / Gimp for image processing
- An enthusiasm for programming and a willingness to keep abreast of new developments in technology.
- Flexibility to deal with changing projects and priorities in a short space of time.
- Excellent debugging, and fault diagnostic skills.
- Experience of deploying and supporting applications.
- Experience of using Git version control.
- Experience of build automation such as Grunt or Gulp.
- Outstanding written and verbal communication skills.
- A team player who helps others to grow and improve.

Key Programming skills/Experience

- HTML5
- CSS3
- JavaScript

Desirable skills

- Experience building applications in OOP PHP 5.
- Experience of using lean methodologies such as Scrum or Kanban.
- Experience of test driven development: unit and integration.
- Experience of writing SQL scripts and understanding of MySQL.
- Experience of security strategies for cloud hosted applications.
